REMOTE CONTROL GRAIN DOORS

Single, double and triple doors are available allowing you to use 1, 2, or 3 products out of one truck by in-stalling V-form divisions in your tipper. The standard range of rota doors are 250mm wide which will feed up to a 9 inch auger. Grainline also offers a 350mm wide opening in single, double or triple doors for feeding large augers.

Rota Doors can be spring loaded and operated manually using ropes or cables.

Utilise your tipper for sowing

The use of Grainline's remote control doors and the concept of being able to open, close and control the flow of materials out of your grain doors from the platform of your seeder box have revolutionized the sowing operation. By creating an easy one man operation, it also reduces the risk of scrambling up and down from your seeder. With the hand held transmitter the doors will only operate when you're pressing the buttons enabling you to make slight adjustments to get the correct flow. Indicator lights, manual override switches and a 12V auxillary plug are all valuable features supplied on the control box.
